 Office of the Executive Yuan.

CHINA'S ELECTRIC POWER

During the war the Natural Resources Commission succeeded in removing
 to the interior 30 sets of machinery weighing more than 5,000 tons. This
 machinery was desperately needed in the construction of new power plants or
 in the replacement of parts of existing plants.

Power plants located in Free China at the close of the war, and their
 capacity in accordance with types of installations, were as follows:

Location	Type of Installations and Capacity (kw)					Total
	Turbine	Steam	Diesel	Gas	Hydroelectric	
Ch'eng-tu	3,000					3,000
Wu-t'ung Ch'iao	500(a) 2,000(a)		200(a)			2,700

Total.						53,412

NOTE: (a) Machinery removed and reinstalled from the coastal plants.
 (b) Machinery manufactured in China.
 (c) Machinery purchased from abroad during the war.

Of the 28,000-kilowatts capacity of machinery indicated under (a),
 (b) and (c), 24,000 were installed by the Commission.

Hydroelectric plants of 200 kilowatts each are under construction
 at T'ien-shui and Nan-cheng.

Hydroelectric power plants constructed during the war, with power output
 of more than 100 kilowatts were as follows:

<u>Location</u>	<u>Name of River</u>	<u>Power Capacity (kw)</u>	<u>Remarks</u>
Ch'ang-shou(a)	Lung-ch'i Ho	3,000	Plans made to in- crease output to 64,000 kw

Present Condition of Electric Power

During Japanese occupation both Taiwan and Manchuria experienced considerable electric development. Taiwan now has a power capacity (installed) of 320,000 kilowatts with 120,000 more being built.

The total power capacity in Manchuria at the close of war was 1,768,920 kilowatts, of which 619,000 was hydroelectric, but this amount has been reduced to about 414,150 kilowatts as a result of Soviet removal and Communist destruction. Most plants in the Northeast are located in the area south of Ha-erh-pin (Harbin) and east of Fengman and are joined by high-tension wires of 220, 154, 44, and 11 kilovolts. The actual power output of Manchuria is now said to be about 245,000 kilowatts, or 15 percent of the original. Of the 245,000 kilowatts actual output, 135,000 is hydroelectric.

Japan contributed little towards the development of electric industry in China proper. The Japanese merely moved plants from one place to another to meet the exigencies of wartime. They did construct an 18,000 kilowatt power plant at Ta-t'ung and a 25,000-kilowatt one at Hsia-hua-yuan, but they were recently destroyed by the Communists. Therefore, either through removal or by war destruction, the power facilities of China were reduced by about one half under the Japanese.

The distribution of electric industry in China, as of December 1946, was as follows:

<u>Location</u>	<u>Capacity (kw)</u>		<u>Estimated Capacity of Other Plants (kw) (a)</u>
	<u>Installed</u>	<u>Actual</u>	
Shang-hai	219,000	153,000	--
Kiangsu	81,950	65,200	4,000
Chekiang	22,328	14,628	3,000
Anhui	2,800	2,800	200
Hupeh	22,500	22,500	400
